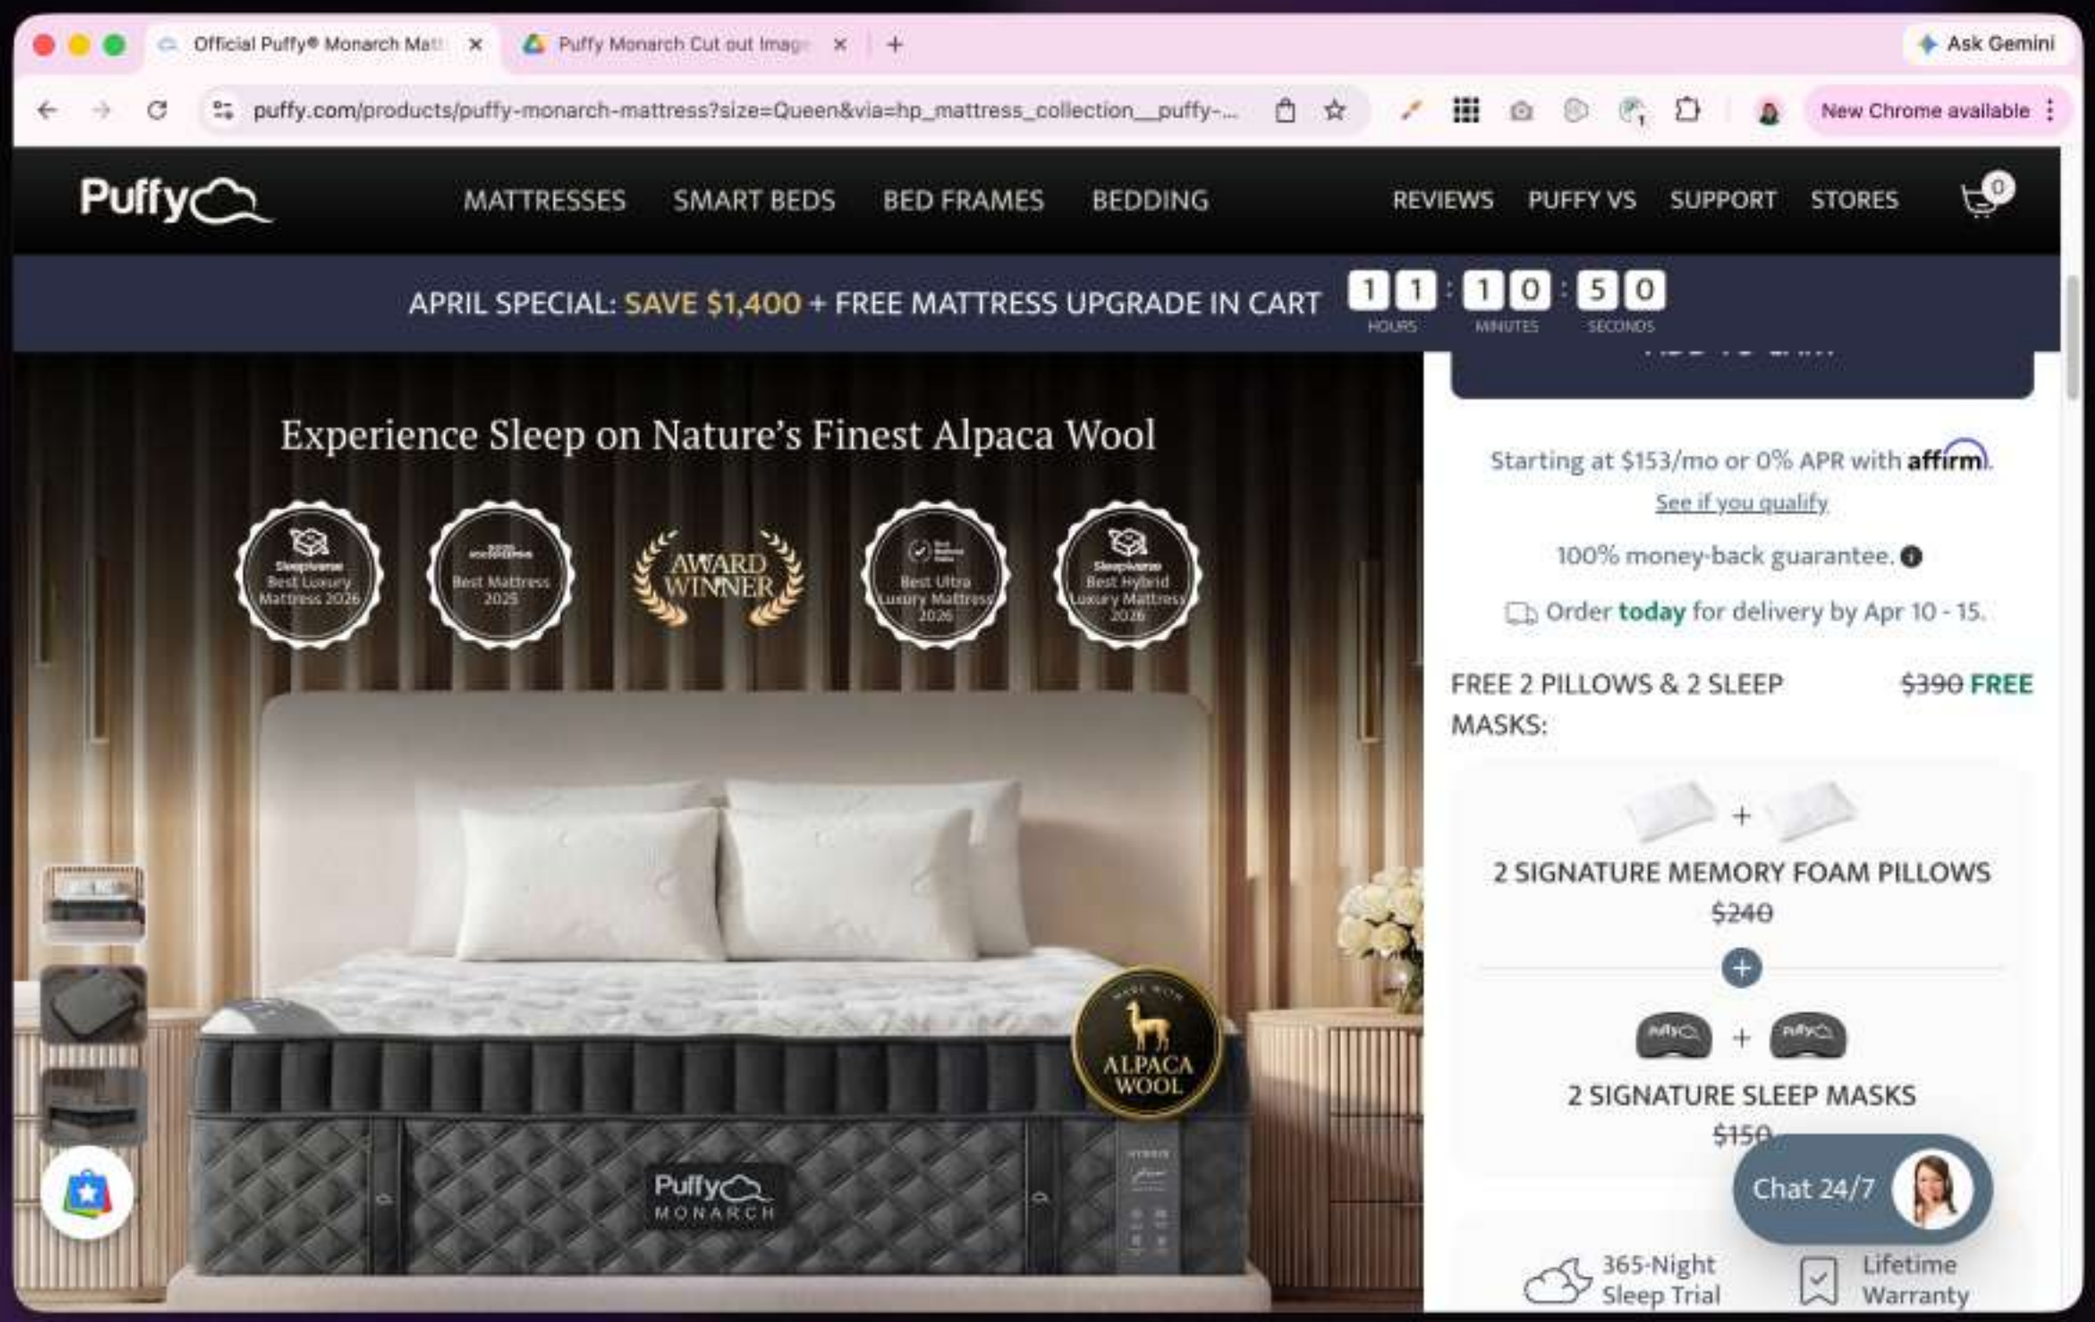
10X your Figma Prototyping Workflow using AI as your thinking partner

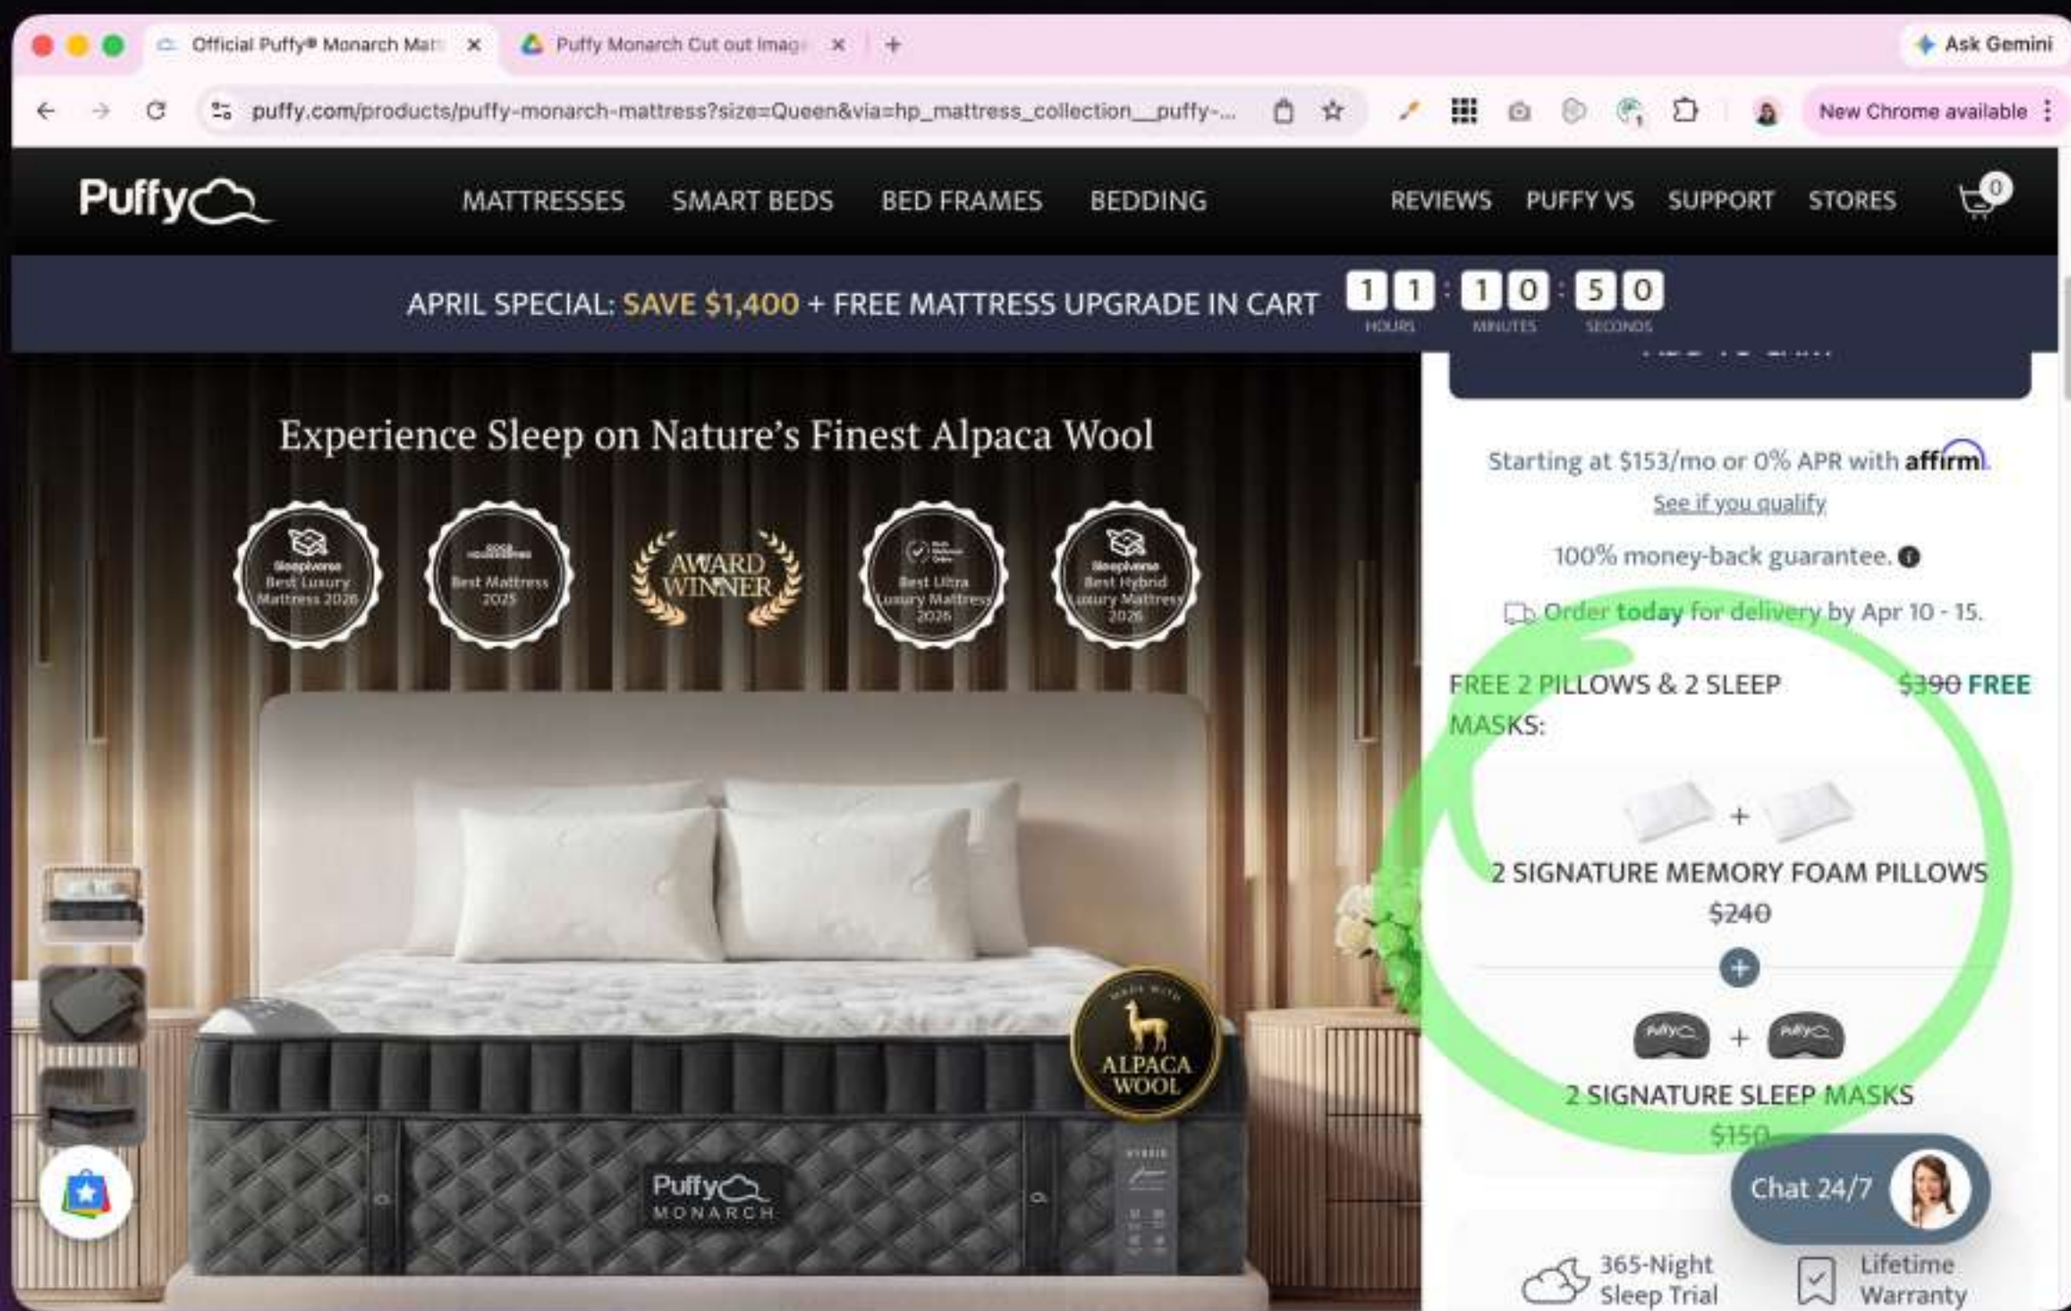
ZEAL SHETH
AI-FIRST PRODUCT DESIGNER + STRATEGIST

- Recently, I worked on a interview task assignment with Puffy.com to redesign ‘Free Product Bundle’ Set offering on their website.
- The goal was to make ‘Free Bundle’ be perceived as a valuable upgrade and great deal for customers.
- I used Figma Make AI Tools as my think and design partner to quickly prototype my design.
- In this article, I will talk about how and where AI (as of today, Apr 2026) can really provide value.
- So, Let’s GOOOOOO ——→

Existing Puffy Website Product Page



“How might we improve the ‘Free Bundle Set’ Design to increase it’s perceived value to the customers?”



My Figma Make Prompt for Redesign:

I have attached the Product Detail Page screenshot of the Monarch Mattress on the puffy.com website. On the Right side bar I want to add a Bundle selector Module.

Bundle Selector Module Details:

Content:

1. It displays $249 Sleep Essentials Bundle (2 Premium Pillows, Silk Sleep Mask, Lavender Spray) with images and prices per item.
2. Create placeholders for Product Name, Images, Price.

Interaction:

1. This module is my default selected when the user lands on this page. User has the choice to deselect it.

Visual Aesthetics and Styling:

1. The module should feel like a premium upgrade, not just a promotional banner.
2. Use the Visual Colors to be Cohesive with Puffy website's branding.
   a. Dark Navy Blue Color: #2A2F47
   b. Green Color: #007C55
   c. Background Color: #E5E3E0
   d. Surface Color: #FBFBFA
   e. Text on Surface Color: #333333
   f. Premium Highlight Color: #A98841
   g. Secondary Container Color: #F4E3CC

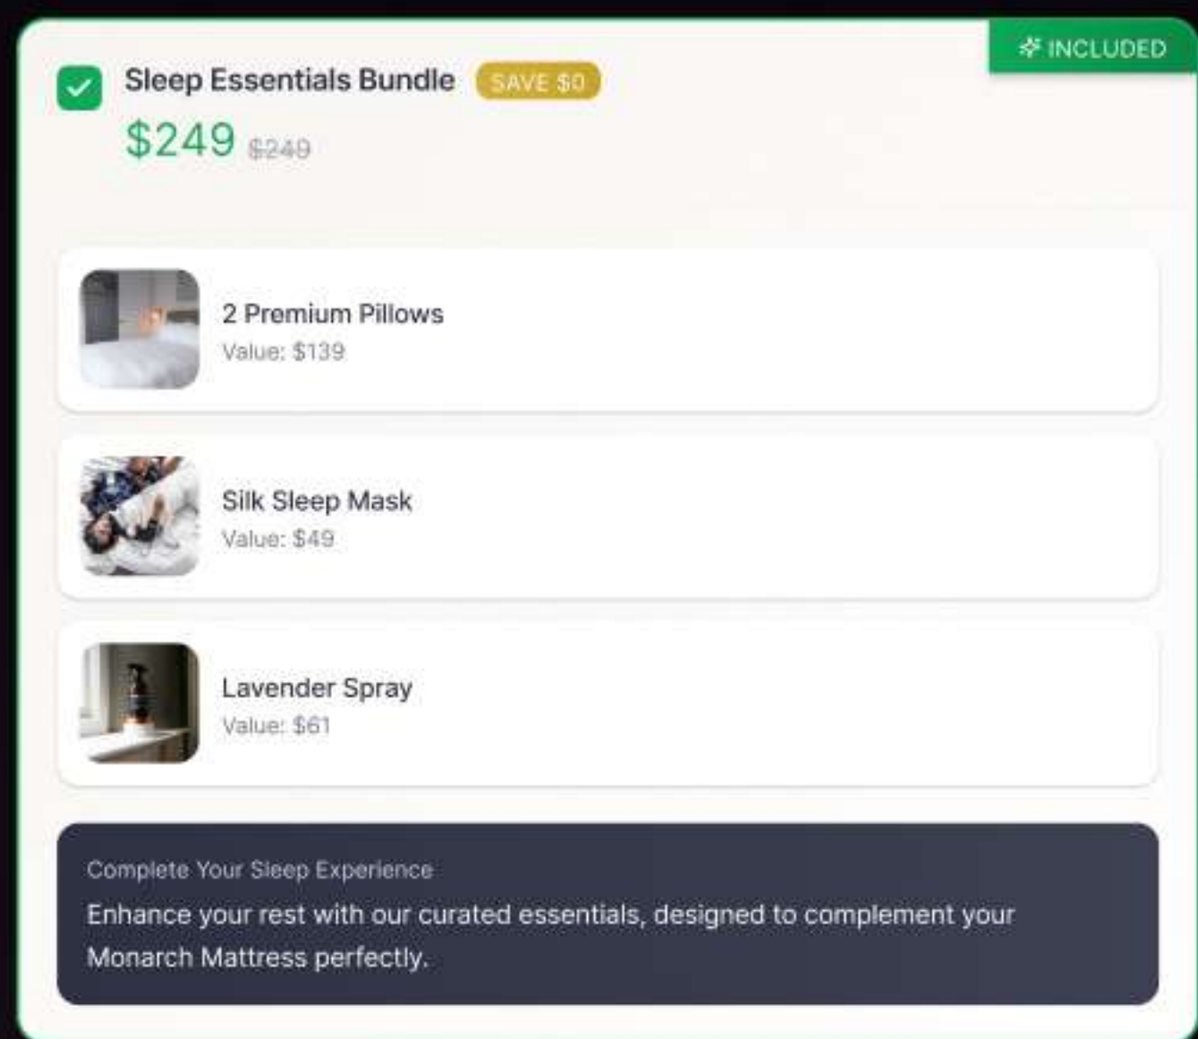
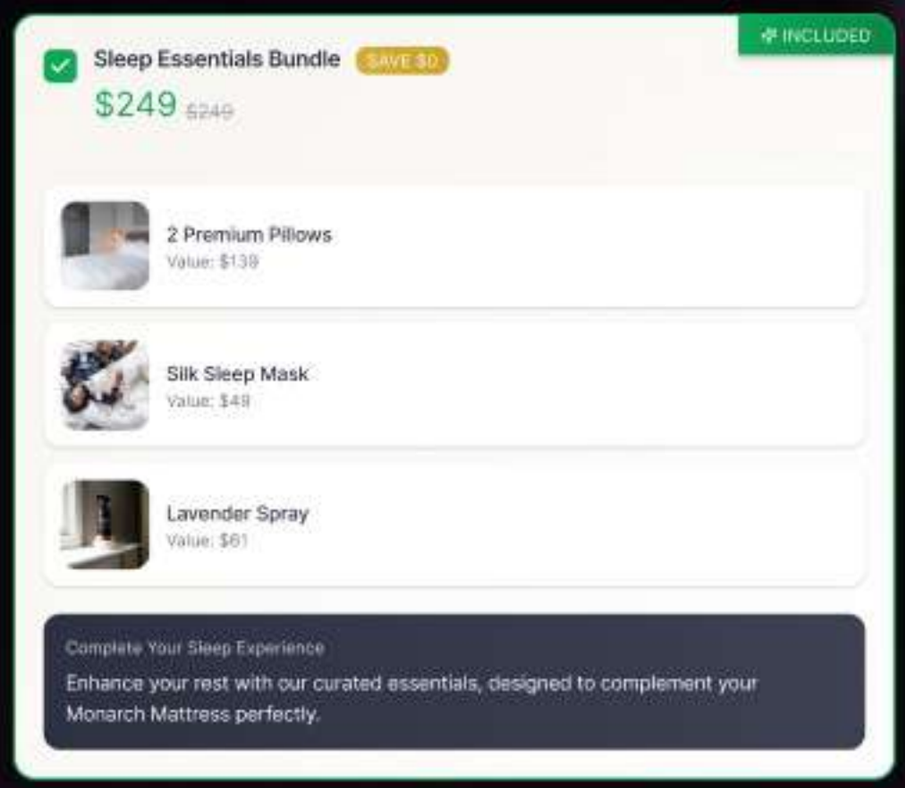
Prompt is specific on the inputs given, expected output and the tasks that need to be done.
For the UI, I **specified foundation blocks i.e. Content, Interaction and Visual Aesthetic** to provide enough direction to AI

Providing the **Brand Color palette rather than asking AI to extract it.** I tried both the methods , first, asking AI to detect colors from the website. This is high token consumption for visual reading and gives inaccurate results. So, I finally extracted the brand colors manually to get the accurate Puffy's brand colors and provided in the prompt.

AI Redesigned Output



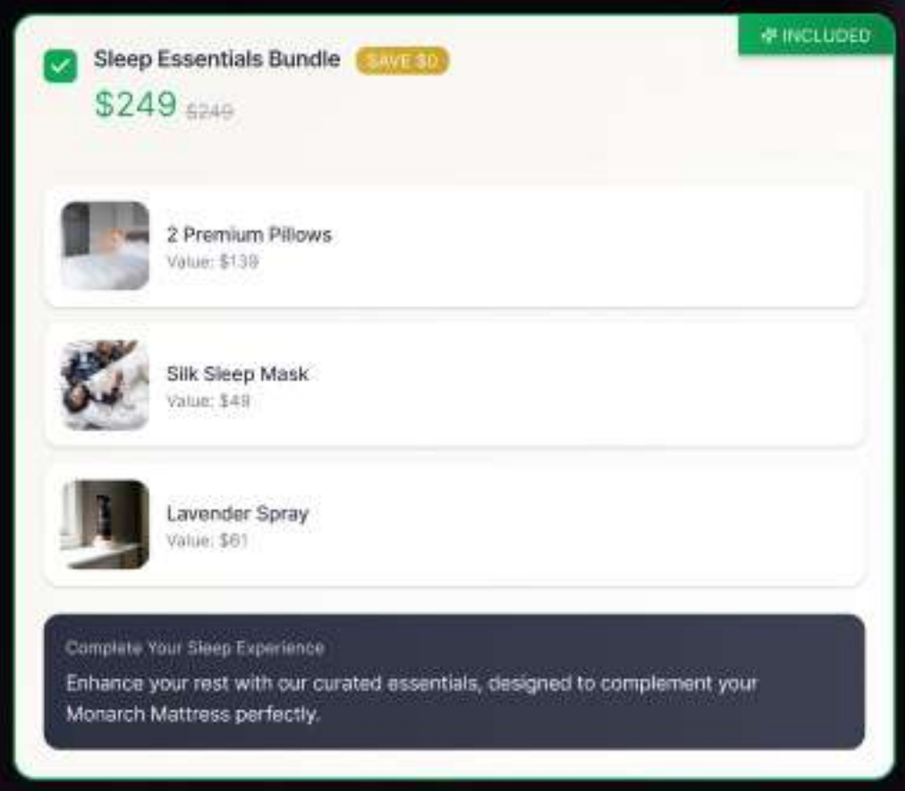
My UX Audit of AI Redesigned Output



✅ **PROs**

1. Design accurately represents content.
2. Neat and Responsive.
3. Follows Brand Color Palette.

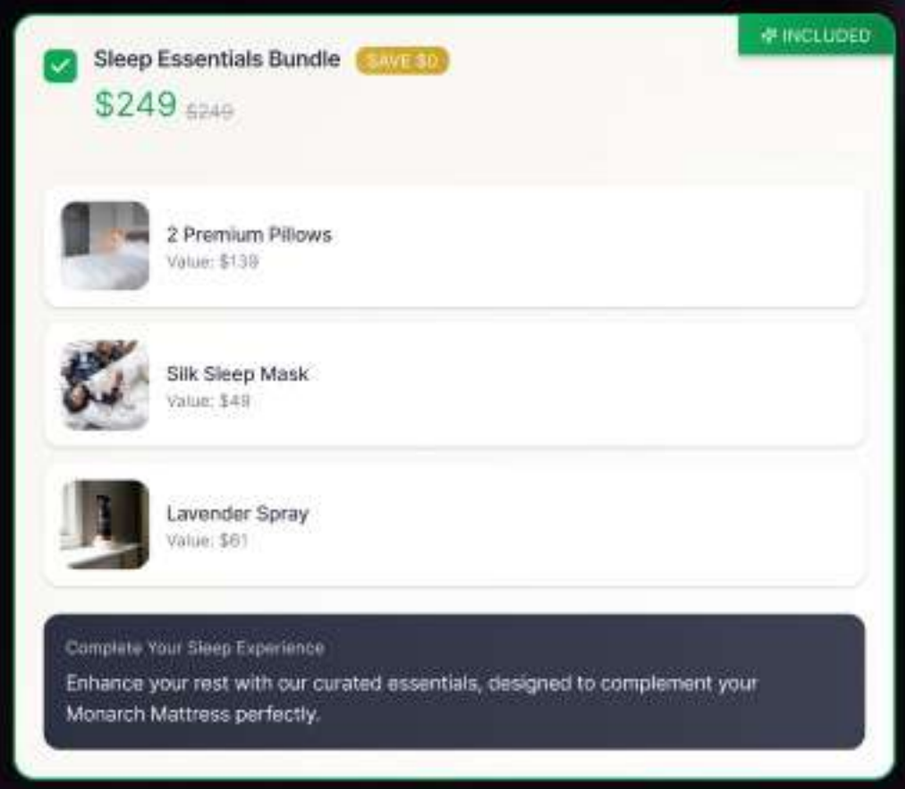
My UX Audit of AI Redesigned Output



❌ **CONs**

1. The **card green highlight** cues to branding that associates with eco-conscious, calm and NOT luxurious.
2. **Images are not clear** representation of product offering.
3. **'Save $0' pill** is not user enticing, doesn't add any value.
4. Navy Blue is primary color used for CTAs. Using it for **Feature Highlight Card creates confusion in the User Mental Model** formed regarding the interface function. Is it Read-only or Clickable?

My UX Audit of AI Redesigned Output



🤔 **Open Questions**

This card currently occupies a lot of screen real estate on the Right Side Bar for Billing Preview. Is there a way I can make **information display more succinct?**

I partnered with Figma Make's AI, through iterative prompting, direct edits in the Claude Code and Manual Design Fixes on Figma to get the final design.

CONCLUSION

1. AI can produce UI & UX Designs as sophisticated as they are prompted.

2. Adding Skills.md, Rules.md to add the Design System, Heuristic Checks can help design ideation , verification and validation.

3. Human Intelligence and nuances when partnered with AI can create production grade output 10X faster.

Thank you !
